SECTION 1 · CHEAT SHEET

Vibe coding, Antigravity and Google's AI tools

Every prompt, command, shortcut and setting from this section, lesson by lesson. Prompts are word for word, as typed on screen.

1.1 Section 1 introduction

Concept lesson: nothing to type, run or set.

1.2 What vibe coding is

Concept lesson: nothing to type, run or set.

1.3 What an AI agent does

Concept lesson: nothing to type, run or set.

1.4 What Antigravity is

RESULT

Four surfaces, one agent

The **App** (Windows, Mac, Linux; most of this course), the **CLI** in a terminal, **extensions** for six code editors, and the Python **SDK**. All run on the same agent harness, with one Google sign-in.

COMMAND

```
agy
```

Starts the CLI: the same agent, talked to inside a terminal.

1.5 The models you can use

SETTING

Message box › the model name (Gemini 3.8 Flash, High)

Opens the model list. Gemini 3.8 Flash is on every plan, the free one included; High is its thinking level. Gemini 4 Argon and the newest Claude models come with Pro and Ultra.

SETTING

Model list › View Usage

Shows what is left: one limit resets every five hours, one every week.

PROMPT

```
In two short sentences, what is the difference between a fast model and a thinking model?
```

A first question on Gemini 3.8 Flash, the model this course uses.

1.6 Your Google AI plan, a walkthrough

SETTING

Google AI plans page › the country picker

Sets the prices to your country. Kept on the United States here: Plus **$4.99**, Pro **$19.99**, Ultra from **$99.99** a month.

SETTING

Antigravity docs › Plans

Every plan gets every feature and Gemini 3.8 Flash. AI Pro refreshes every five hours up to a weekly limit; without Pro or Ultra the quota is weekly. The free plan is enough for this course.

1.7 Download and install

SETTING Antigravity website › Download › Windows › x64

The installer for Intel and AMD processors; ARM64 is for laptops with an ARM chip. A Mac gets Apple silicon and Intel installers; where this course presses Ctrl, a Mac presses Cmd.

SETTING Resources › docs › Get Started › Authenticate

One sign-in, shared by the App, the CLI, the editor extensions and the SDK.

SETTING App › Sign in › your Google account

The browser opens, you pick the account, and it sends you back to the App, ready to use.

1.8 The App, a walkthrough

SETTING Sidebar: the new project button next to Projects › my-website

A project is a folder on your computer; here an empty practice folder.

PROMPT

```
Create a file called ideas.md with three ideas for a simple one-page personal website. Keep each idea to one line.
```

The conversation gets a name of its own and sits under the project. **Review** opens the change.

SETTING The project's menu › Project Settings › Add Folder › my-notes

A second folder in the same project; the agent can work in both.

PROMPT

```
Read about-me.md in my-notes and add a one-line headline about me at the top of ideas.md.
```

It searches, reads both files, thinks, then edits ideas.md.

SETTING New conversation › the project picker › No Project

For quick questions that touch no files.

PROMPT

```
In two short sentences, what is a favicon on a website?
```

Answered with no folder touched; it waits under the no-project list.

SHORTCUT `Ctrl+K`

Searches every conversation; a click goes straight back into one.

SHORTCUT `Ctrl+Shift+P`

The command palette. Type **collapse**, then pick Collapse All Folders.

1.9 Giving the right context

SHORTCUT `@`

Opens the mention menu: Rules, Conversation, and project files once you type part of a name. A click makes a mention chip.

PROMPT

```
@ideas.md Which of these three ideas is the easiest to build first? Answer in two short sentences.
```

The agent reads just that file and picks the digital business card.

SHORTCUT `Ctrl+L`

Or the Quote button that appears on selected text: puts that part of an answer in the message box as a quote.

PROMPT

```
Suggest three short section names for this card.
```

Sent with the quote: Profile, Resume and Connect.

SETTING @ › Conversation › Personal Website Ideas File

Mentions an earlier conversation; typing a word narrows the list.

PROMPT

```
What headline did we add to ideas.md in that conversation? One line.
```

Sent with that mention: the agent looks back and finds the headline.

SETTING @ › Rules

Lists the house rules the agent already follows.

1.10 Artifacts

PROMPT

```
Build the digital business card from ideas.md as one page, index.html, with plain HTML and CSS, a crisp light theme and placeholder links. Write an implementation plan first and wait for my review.
```

Sent in a new conversation in my-website. It reads the files, then stops with an implementation plan.

SETTING Click the plan › read it in the right panel

File, contents, colours, fonts, phone layout, steps, and a couple of questions for you.

SHORTCUT `Ctrl+Enter`

Proceed: approves the plan and the agent builds index.html.

PROMPT

```
Open index.html in the browser, check it at desktop and phone sizes with screenshots, and write me a short walkthrough of what you built.
```

Back come visual previews at both sizes, and a walkthrough of what was built, part by part.

1.11 Google AI Studio, a walkthrough

SETTING aistudio.google.com › Playground › the model card › Gemini 3.8 Flash

Free with a Google account; Gemini 3.8 Flash has a free tier, Gemini 4 Argon is paid here.

SETTING Run settings › Thinking level: Medium, Grounding with Google Search: on

How much it reasons first; and lets it check the web while it answers.

PROMPT

```
In three short bullet points, explain what a Pomodoro timer is and why people use it.
```

Sent with **Run** (Ctrl+Enter). Back in three parts: the technique, its cycle, why it helps.

SETTING Get code

Starter code for this prompt. The API key is never in the code; it is read from a private setting.

SETTING New app › the mode picker: Default, Plan or Max

Build mode. Default changes things right away, Plan writes a plan first, Max works longer.

PROMPT

```
A simple Pomodoro focus timer: a big countdown, 25 minutes of focus and a 5-minute break, with Start, Pause and Reset buttons, and a calm, clean design.
```

Built in almost five minutes and running live in the preview; **Code** shows the real files.

SETTING Export › Export to Antigravity, Push to GitHub or Download as zip

Export to Antigravity brings the code and the whole conversation to your computer. **Publish** puts the app on the web; **Share** invites people.

SETTING Edit mode › click a part of the app

The part joins the chat as the thing to change; describe it in plain words.

1.12 Google's AI tools, a quick tour

SETTING stitch.withgoogle.com › Web › Balanced

Stitch designs the look. Balanced runs on Gemini 3.8 Flash; Speed on Gemini 3.5 Flash Lite.

PROMPT

```
A homepage for a small neighbourhood cafe: a warm hero photo, a short menu with
prices, opening hours, and a Book a table button. Calm and friendly.
```

A complete homepage on the canvas. **Export** sends it to AI Studio, Figma, or Antigravity through MCP.

SETTING notebook.google.com › Create notebook › Website and YouTube URLs › Insert

Gemini Notebook, once NotebookLM, answers from your sources only. The source here: **https://en.wikipedia.org/wiki/Coffeehouse**

PROMPT

```
What made coffeehouses popular meeting places in their communities?
```

Each point carries a number; hover it to see the exact passage it came from.

SETTING Studio › Mind Map

From the same sources: Audio Overview, Video Overview, Slide Deck, Flashcards, Quiz and more.

SETTING flow.google.com › a project › the agent's settings

Images from Nano Banana 2.1; video set to Veo 3.1 Fast.

PROMPT

```
Create an image of a cozy neighbourhood cafe at sunrise: warm light through big
windows, a barista behind the counter, fresh pastries on display.
```

Two versions in seconds.

PROMPT

```
Turn the second image into a short video: steam rises from a fresh cup as the
barista slides it across the counter, with a slow camera push in.
```

The agent asks before spending: **20** credits. Everyone gets **50** free Flow credits a day. Back comes an eight-second clip.
