SECTION 5 · CHEAT SHEET

Design the cafe: Stitch, photos, menu card and video

Every prompt, command, shortcut and setting from this section, lesson by lesson. Prompts are word for word, as typed on screen.

5.1 Section 5 introduction

Concept lesson: nothing to type, run or set.

5.2 Brand brief with Gemini Notebook

SETTING

Gemini Notebook › new notebook › Add source › Upload files

Three files from the cafe project: the printed menu card, the founder's profile and the 30 customer reviews (a CSV file). The notebook writes a short overview of them straight away.

RESULT

Rename the notebook: KGP Vibes Cafe brand

It names itself after the first source; give it your own name.

PROMPT

```
Write a one-page brand brief for KGP Vibes Cafe that a web designer can work from:
who our customers are, the brand's personality and tone of voice, what customers
love and what they complain about, the signature items to feature, and five words
that describe the brand.
```

The answer comes as a report in the Studio panel, built from all three files. Thorough, but far longer than one page.

PROMPT

```
That is too long for us. Give me a short version in the chat, under 150 words, for
the designer: who our customers are, the tone of voice, five words for the brand
and the signature items. Leave out anything our demo website does not have, like
live stock levels or speed targets.
```

A short brief that fits the job.

SETTING

The answer › Save to note

Keeps the short brief in the notebook, under Notes. This is the brief Stitch gets.

SETTING

Studio › Audio Overview › customise › Brief › focus › Generate

Two hosts talk the notebook through. Focus used: **The cafe's brand in a few minutes: who comes to the cafe, what they love, and how the new website should feel.** The dialog shows how much usage it takes.

RESULT

Click a citation number in the answer

Opens the source with the lines it came from marked. That is how you check the notebook is not making things up.

5.3 Design the screens in Stitch

PROMPT

```
Design a website for KGP Vibes Cafe with four pages: Home, Menu, Cart and Checkout.
Here is the brand brief from our notebook:
```

Stitch > **Web**. The notebook brief (its copy button) is pasted underneath. A design system comes first, then the four pages.

SETTING Upload Files › the printed menu as an image

Stitch never saw the menu, so it guessed rupee prices and UPI. Give it the real thing.

PROMPT

```
Here is our printed menu. Use these dish names and prices, in US dollars, on every
page. Checkout is a demo: one simple card form, no UPI or campus cards.
```

All four pages updated: menu prices in US dollars, one demo card form.

SETTING Select the Home page › + › Variations

Several versions of one screen at once; the original stays.

PROMPT

```
A calmer Home page: more space, bigger food photos, and less developer jargon in
the text.
```

Three new Home pages side by side.

PROMPT

```
Now make a mobile version of the four original pages: Home, Menu, Cart and
Checkout.
```

Each page redrawn at phone width, with the navigation in a bar at the bottom.

5.4 Connect Stitch to Antigravity

PROMPT

```
Save this brand brief from our notebook as brand/brand-brief.md:
```

Sent in a new conversation in the cafe project, with the brief pasted underneath (Shift+Enter, then Ctrl+V).

SETTING Customizations › Installed › MCP Servers › + › search Stitch › Add

MCP: a tool offers actions, the agent calls them.

SETTING Stitch › profile menu › Stitch Settings › API key › Create key › copy

Free, no billing. Paste it into Antigravity, then **Install**. Treat it like a password.

PROMPT

```
List my Stitch projects.
```

Stitch has 16 tools; each asks once: **allow for this conversation**. Found: KGP Vibes Cafe Website, 12 screens.

PROMPT

```
From the Stitch project KGP Vibes Cafe Website, read the design system and write
DESIGN.md in the project root: the colours with their hex codes, the fonts for
headings, text and labels, and the spacing and corner radius. Use brand/brand-
brief.md for the tone of voice.
```

DESIGN.md: the warm orange, coffee brown and green, a serif for headings, a clean font for text, a code font for labels, a 4 px spacing rhythm and the corner sizes.

5.5 Build the website

PROMPT

```
Before we build anything, compare DESIGN.md with AGENTS.md, the rules in
.agents/rules and brand/fonts.md. List everything that disagrees. Don't change any
files yet.
```

It lists clashes and asks which file should win.

PROMPT

```
DESIGN.md is the look from now on: colours, fonts and spacing. Update
.agents/rules/site-look.md so it points to DESIGN.md instead of repeating colours
and fonts, and update brand/fonts.md to the fonts in DESIGN.md. AGENTS.md still
decides the words: plain, friendly copy for customers, no terminal-style jargon.
Keep the site's scope as it is today, so no command palette, Wi-Fi status, desk
pool or table reservations.
```

One job per file.

PROMPT

```
/goal Rebuild the look of every page in site/ from the Stitch project KGP Vibes
Cafe Website. Read the Home, Menu, Cart and Checkout screens and follow DESIGN.md.
About and the order confirmation have no screen, so give them the same design. Keep
everything that works today: the menu data, the cart, the pickup times and the demo
checkout. Done when python scripts/test_order_flow.py passes.
```

After /goal, the finish line is a command. Six files changed, nine checks passed.

5.6 Pixel check

PROMPT

```
/browser Open localhost:8000 and compare every page with its Stitch screen in KGP
Vibes Cafe Website: Home, Menu, Cart and Checkout, at desktop width and at phone
width (390 pixels). Take a screenshot of each, list every place where the site
differs from the design, then fix them and check again.
```

/browser drives a real browser; Chrome asks once to **allow remote debugging**. Read the agent's table critically: it copied words and extras too.

PROMPT

```
You copied more than the look. DESIGN.md owns only the look, and AGENTS.md keeps
the words plain and the site in its scope. Keep the colours, fonts, spacing, cards
and phone layout you matched. Undo the rest: bring back the plain headlines,
buttons and section names we had, and remove the telemetry ticker, the Wi-Fi
details, the coding pod and table booking, and the payment options. Then run python
scripts/test_order_flow.py and compare the pages again at both widths.
```

Plain words back, extras gone, all nine checks pass.

PROMPT

```
Your screenshots still show a few problems. The home photo and many menu photos are
broken links: remove them and show a plain cream placeholder until we make our own
food photos. The menu cards still have code tags like <vegan_fuel/>: use plain
labels such as Vegan. The order confirmation page still has the old status strip,
the Wi-Fi password and Compiled Menu. And the checkout page shows 0 items while the
cart has 4: keep one checkout, the one inside the cart page, and point every
Checkout link there. Then run the test and take the screenshots again.
```

Found in the agent's own screenshots; the test caught none of it.

5.7 Food photos

PROMPT

```
Make food photos for our menu with Nano Banana. One photo for every item in
baseline/menu.csv, all 39, in one style: the real dish on a cream table, soft
daylight, seen from slightly above, no text, no logos, no people. Save them in
site/images/menu/ named by item_id, show each one on its menu card in place of the
cream placeholder, then run python scripts/test_order_flow.py.
```

Image helpers (subagents) run Nano Banana side by side.

PROMPT

```
No stock photos from Unsplash or any other site. Make every photo with Nano Banana,
in the same style as the ones you already made. If image generation stopped, tell
me why.
```

Answer an unasked detour with **No** and an instruction. Quota ran out after 12 photos; the rest stay placeholders.

SETTING

Flow › new project KGP Vibes Cafe photos › agent settings › 16:9, x2, Nano Banana Pro

Confirm before generating stays on. Flow is where you pick one photo by eye.

PROMPT

```
A hero photo for our cafe website's home page: a clay cup of masala chai and a
chocolate brownie on a cream table by a sunny window, soft daylight, warm and calm,
empty space on the left for a headline, no text, no logos, no people.
```

Pick the option that leaves the left side open, then download it at **2K**.

PROMPT

```
Here's the hero photo we made in Flow:
C:\Users\laxmi\Downloads\Masala_chai_and_chocolate_brownie_699559fa_2K.jpg. Copy it
to site/images/hero.jpg and use it as the home page hero, with our headline over
the empty space on the left. Keep the headline readable on a phone too, then run
python scripts/test_order_flow.py.
```

Downloads is outside the project: **allow once**.

5.8 Print-ready menu card

PROMPT

```
Make a print-ready menu card for the cafe tables from baseline/menu.csv, in the
same look as the site: its colours, fonts and cream cards. All 39 items with their
prices, grouped by category, on one page, and no photos so it prints cleanly. Add a
QR code that opens the menu page. Keep the site address in one setting, for now
http://localhost:8000/menu.html, so we can change it when the site goes live.
Export two PDFs into print/, one A4 and one US Letter. Then check that the QR code
reads back to that address and that nothing is cut off at the edges.
```

One script, scripts/generate_menu_card.py.

FILE

print/menu_a4.pdf

Open it and look: the checks passed, but the icons print as empty squares.

PROMPT

```
The category icons and the logo print as empty squares, so the font has no symbol
for them. Draw them as simple shapes or use the cafe logo from the site instead, so
they print in any PDF viewer. Then export both PDFs again and repeat the checks.
```

Drawn icons; print/menu_letter.pdf is the same on US Letter. At launch, change the address and rerun.

5.9 Promo video in Flow

SETTING

Flow › the photos project › agent settings › video default: 9:16, confirm before generating on

Vertical for a phone screen; every cost is shown before it is spent.

SETTING

Attach › the hero photo from the project

The video starts from the same picture as the website.

PROMPT

```
Make a 15-second vertical promo for Instagram and YouTube Shorts for the opening of our second cafe in Indiranagar. Start from our hero photo: steam rises from the clay cup of masala chai and the camera slowly pushes in, warm morning light. Then a second shot: a brownie and a cup of chai are set down on a cream table in a cozy cafe, soft daylight. Calm and warm, gentle cafe sounds, no music, no voices, no text on screen.
```

The agent checks the request against its models: 15 s needs a model not available yet; vertical Omni 1.1 Flash goes up to 10 s, Veo up to 8 s.

PROMPT

```
Make it 10 seconds with Omni 1.1 Flash, and keep both shots.
```

A single start frame can only make one shot; a reference keeps the look across both.

PROMPT

```
Option 2: use the hero photo as a reference and keep both shots.
```

The confirmation card shows the cost: one video, **15 credits**. Approve.

RESULT

A 10 s vertical clip in the project

Preview it with the sound off: steam and a push-in on the cup, then a brownie set down by the chai.

5.10 Live widgets

COMMAND

```
/generative_ui
```

The agent answers with a widget: a small interactive page saved as an artifact. App only.

PROMPT

```
Show the cafe's sales by category from baseline/sales/order_items.csv as a standalone widget: a bar chart of revenue for each category, a switch between revenue and items sold, and the top three items of a category when I click its bar. Work out the numbers with a script first, and show the total so I can check it against baseline/sales/orders.csv.
```

Sent in a new conversation, after the command chip. The agent writes and runs a script before it draws.

RESULT

The verification table

Total revenue **$30,416.40** from the order lines, exactly the orders file; 8,549 items, 3,895 orders. Read it before you trust the chart.

SETTING

The reply › Cafe Sales By Category › open full size

Totals on top, a bar per category, Revenue and Items Sold switch, click a bar for its top three.

RESULT

A widget is a snapshot

When new sales come in, ask the agent to update it.
