SECTION 10 · CHEAT SHEET

Always-on agents and the capstone

Every prompt, command, shortcut and setting from this section, lesson by lesson. Prompts are word for word, as typed on screen.

10.1 Section 10 introduction

Concept lesson: nothing to type, run or set.

10.2 Automations

PROMPT

```
Nightly sales summary
```

Sidebar > Automations > New. Model: **Flash**, the default. It runs on this computer.

SETTING

Trigger › Schedule › Every day › 10:00 PM

After the cafe closes. Runs start close to the time, not on the exact minute.

PROMPT

```
Work in the KGP Vibes Cafe project at D:/Antigravity Course/kgp-vibes-cafe-main/kgp-vibes-cafe-main. Read the sales database db/sales.duckdb and write a short summary of the latest day in it: the number of orders, total sales, the five best-selling items, and anything unusual. Save it as drafts/nightly-sales-summary.md, replacing any older one. Only read the database, and don't change any other file.
```

The instructions: the message the agent gets on every run, written for an agent nobody is watching.

SETTING

Automations › Nightly sales summary › menu › Run Now

Tests it straight away. The run opens in the sidebar, in a project of its own.

FILE

drafts/nightly-sales-summary.md

The only new file in the review: orders, sales, best sellers, anything unusual.

SETTING

Automations › Nightly sales summary › switch off

It moves down to Paused, so nothing runs tonight. Switch it on again any time.

10.3 In-session timers

PROMPT

```
/schedule every 5 minutes, check that the cafe live site at kgp-vibes-cafe.vercel.app loads and its menu page shows prices
```

Runs once straight away, then every 5 minutes. Each result lands in this conversation.

PROMPT

```
Which checks are scheduled in this conversation? Cancel all of them.
```

In the App a schedule is stopped by asking. It lists the check, cancels it, nothing is left.

PROMPT

```
/schedule in 10 minutes, check that the cafe live site still loads
```

In **agy**: a one-time timer. It shows under the prompt.

COMMAND

```
/tasks
```

Lists everything running in the background. Press **k** on the timer to stop it.

10.4 Work from your phone

SETTING
Settings › Application › Enable Remote Control
One switch: work with local agents from another device. Shown here, left off. A device name is optional.

SETTING
Settings › General › Permissions › Remote
What the agent may do in conversations driven from another device. **This Computer** is the local row.

SETTING
Remote Control dashboard › instance switcher › this machine
Open it in any browser, sign in with the same Google account, then pick the machine.

RESULT
On the dashboard
Follow conversations, start tasks, review plans. The computer must be on and online; same account on both sides.

10.5 Voice

SHORTCUT `Ctrl+M`
Dictation. The microphone in the message box also starts it. Words appear as text; nothing is sent on its own.

RESULT
The round button, next to the microphone
Voice mode: a spoken conversation while the agent works. Shows only while the message box is empty.

SETTING
Settings › General › Voice mode
The voice, the microphone (also used by dictation) and the volume. **Change** opens the voice picker.

SHORTCUT `Alt+M`
Voice mode: mutes your microphone. **Alt+Shift+M** mutes the agent.

COMMAND
```
/voice
```
In the command line: options live, dictate, stop, mute, speaker, duplex, volume and speed.

10.6 Cost and limits

SETTING
Model menu › View Usage
Remaining quota per model family: a weekly limit and a five hour limit.

SETTING
Settings › Models & Usage
The same limits in more detail, the plan, and the **AI Credit Overages** switch (off here).

COMMAND
```
/usage
```
In **agy**: the Models & Quota panel, the same limits in the terminal.

COMMAND
```
/credits
```
The credit balance. Here: AI Credits not enabled, which matches the switch.

RESULT
Overages: never or always
Pro and Ultra only. Never waits for the quota; always moves over to credits until it refreshes.

10.7 A machine that is always ready

COMMAND
```
agy remote-control --help
```
Lists the three subcommands: start, status and stop.

COMMAND
```
agy remote-control status
```
Shows the state and the name. Here: no daemon registered yet. Read-only.

COMMAND
```
agy remote-control start
```
Taught, not run. Registers an OS service (a Scheduled Task on Windows) and starts it with no terminal open.

COMMAND
```
agy remote-control start --name <machine name>
```
Taught, not run. The name shows in the dashboard. Start also has a newer **--session** flag.

COMMAND
```
agy remote-control stop
```
Taught, not run. Stops the daemon and unregisters it.

RESULT
Windows: where you run start

From an Administrator prompt it starts at boot. From a normal prompt it resumes after login.

10.8 Headless agents

COMMAND
```
agy -p "Read baseline/menu.csv and check that every item has a price with two decimals, a diet tag, and a pairs_with item that is also on the menu. Don't run any commands or change any file. Reply with one line per problem, or say the menu is clean."
```
One prompt in, one answer out, back at the prompt. No commands: nobody is there to say yes.

COMMAND
```
The same agy -p line, then --output-format json
```
One JSON object: conversation ID, status, response, seconds and tokens used. Easy for a script.

COMMAND
```
agy -c -p "Save that result to drafts/menu-check.md."
```
-c continues the last conversation. Writing needs a permission, so the step is turned down.

COMMAND
```
Get-Content $HOME\.gemini\antigravity-cli\settings.json
```
Shows the command line's settings file, with the allow rule added in it.

FILE
settings.json > permissions > allow: write_file(drafts/)

Files in drafts/ only, nowhere else. Much narrower than the skip permissions flag.

COMMAND
```
agy -c -p "Save that result to drafts/menu-check.md."
```
The same request again. This time the file is saved.

COMMAND
```
Get-Content drafts\menu-check.md
```
Reads it back: the menu is clean.

10.9 Capstone, part 1

PROMPT

```
/plan Owner's brief: the cafe is launching a Weekend Brunch menu, served Saturday
and Sunday mornings. Six dishes: Masala Omelette Toast $5.50, Paneer Bhurji Wrap
$6.00, Banana Walnut Pancakes $5.00, Chilli Cheese Toast $4.50, Mango Yogurt Bowl
$4.00 and Filter Coffee Affogato $3.50. First design a Weekend Brunch page in our
KGP Vibes Cafe project in Stitch, in the cafe's look. Then build it into the site
as its own page, linked from the menu bar, where customers can add brunch dishes to
the cart. Finish by running the order test and adding a check for the new page.
Don't deploy anything.
```

/plan first: the agent reads, writes a plan artifact and waits.

RESULT

Plan artifact > Proceed

The Stitch screen, the page, the links and the tests, with the six dishes and the house rules. Proceed starts the work.

RESULT

Stitch screen, then the build

Design in the cafe's project, the page, Brunch links, a tenth order check, then a reviewer subagent.

RESULT

localhost:3000/brunch

The real page on this computer. Add a dish and the cart shows it. Nothing is deployed.

10.10 Capstone, part 2

PROMPT

```
The brunch page is approved. Now launch it. First deploy a preview to Vercel and
check the brunch page on the preview: all six dishes at the right prices, and one
dish added to the cart. If the preview is good, deploy to production and check the
live brunch page the same way. Then add the six brunch dishes to the printed menu
card in their own Weekend Brunch section, keep each card to one page, rebuild both
PDFs and check that the QR code still opens the live menu. Next, make one square
promo image for the brunch launch in the cafe's look, with no text on it, and save
it in a new promo folder. Last, draft a short announcement for our customers in
drafts/brunch-announcement.md, with the dishes, weekend mornings and the link to
the live brunch page. Don't send or post anything. Finish with the house rules
review.
```

Preview first, checked, then production, checked. The owner stays in charge.

RESULT

Preview, then production

A protected preview is checked with development settings; the same check then passes on the live page.

RESULT

Menu card

A Weekend Brunch block; the A4 and US Letter PDFs on one page each; the QR code read back to the live menu.

FOLDER

promo/

One square promo image with no text, made by an image generator subagent.

FILE

drafts/brunch-announcement.md

The announcement, saved as a draft. Nothing is sent or posted.

RESULT

Report, house rules review

Six parts: preview, production, menu card, promo image, announcement and the rules review.

10.11 Best practices

RESULT

Give the agent a check

A test or a build it can run. The cafe's order test ran before every big change was called done.

COMMAND

```
/plan
```

Explore, plan, then build: files change only after you approve the plan.

SHORTCUT

`@`

Points the agent at the exact file. A rules file at the project root (AGENTS.md) holds the standards.

SHORTCUT

`Esc`

In the command line, stops a turn that heads the wrong way.

COMMAND

```
/rewind
```

Takes the conversation back to a stable point after changes that broke the build.

RESULT

Permissions: Deny > Ask > Allow

A preset sets the baseline; rules sit on top. Put what must never happen in a Deny rule.

RESULT

Unattended agents

Give a long job a goal it can check. Have it write drafts, then watch and verify.

RESULT

Models and plans

Flash on High for almost everything; Argon when Flash keeps failing. Free refreshes weekly; Pro every five hours.
